

IceBreak Quick Start Guide

Prerequisites

To install IceBreak on your iSeries system the downloaded file must be located on a MS Windows PC on your network.

You must have FTP access to your OS/400 system and the ability to log on to the iSeries server using the security officer profile or equivalent.

Please ensure that these prerequisites are met before installing IceBreak.

Installation

Press the **Download** button and save the file to your PC. Execute the file by double clicking with the mouse. Follow the On-screen instructions to install IceBreak.

Getting started

After IceBreak has been installed

Start IceBreak from Browser:

- Type the URL (<http://IpAddressOfYourServer:7000>). 7000 being the port number of the server.
- The IceBreak ADMIN server web page is displayed and you can access the tutorials, examples, wizards, Programmers Manual etc

- OR -

Start IceBreak from a 5250 session on the iSeries.

- Type **Go IceBreak** on a command line to display the IceBreak menu.
- Select option 12 'Work with IceBreak Servers'.
- Locate ADMIN and use option '21=Start in Browser'.
- The IceBreak ADMIN server web page is displayed and you can access the tutorials, examples, wizards, Programmers Manual etc. The ADMIN server defaults to port 7000.

If the server ADMIN is inactive - then use option 17 on the IceBreak menu to start the IceBreak subsystem.
