

# IceBreak Web Printing...

## ... for worldwide use

*Print any document direct on a local printer on your Business Partners site*

*The need to print documents on external printers on external locations increases, as companies outsource more and more stock, production and distribution.*

The operating system opens a possibility for creating output queues e.g. under IBM Client Access – but this requires that the Business Partner, is given access to the company network. And giving your suppliers access to the company network often means visits to their offices in order to establish a VPN connection etc.

Every connection is pushing costs up - but there is an alternative.

*The IceBreak Web Printing solution is perfect to remotely print any document produced on the System i™.*

Internet browser. The encrypted HTTP layer prevents unauthorized access.

No manual intervention is needed on the PC. The documents can be printed as long as the power is on.

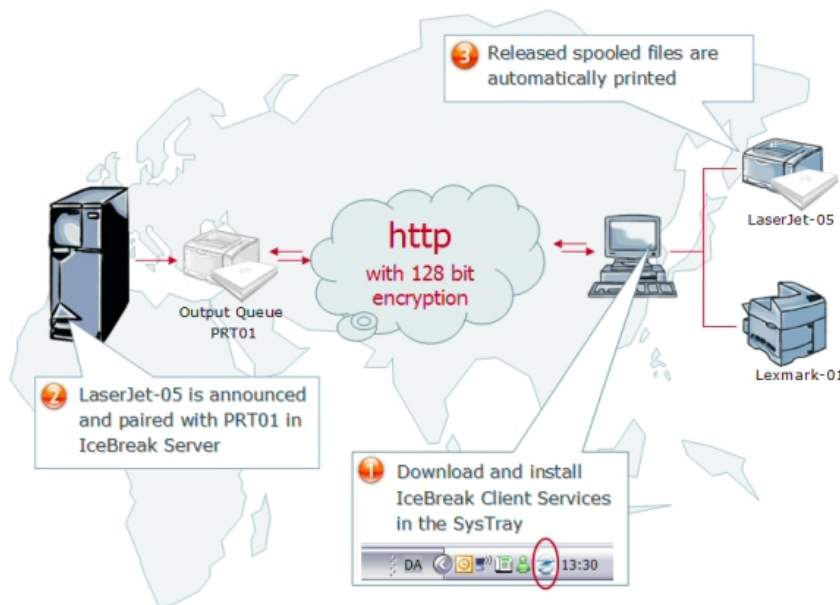

### How does it work?

The external printer in question, is on the System i™, paired with an output queue of your making. The **IceBreak Web Printing Client** will with frequent intervals, connect to **IceBreak Web Printing** software on the System i™. A print that is ready in the output queue will be processed and forwarded to the printer - via the PC.

The solution can handle all known printer models (supported by Windows). Document output from various forms solutions like e.g. InterForm can be forward to the printer as long as the format is supported.

An unlimited number of print queues can be created under IBM i™ (OS400). The Host Print Transform even tells you which type of printer your supplier uses. This service can also supplement IBM Personal Communication to create OS/400-printers for Citrix users.

**IceBreak Web Printing** - same price for all System i™

*IceBreak Web Printing enables you to send print from your System i™ to any printer in the world. It transports the spool file using HTTP and encrypts the spool contents in the process. It is simple and it is safe!*

Just ask your Business Partner to install the **IceBreak Web Printing Client** on a Windows PC.

Any printer on connected to that PC can be made available for your System i™.

**IceBreak Web Printing** runs directly over the Internet, but independently from the

### The IceBreak product line ...

#### Enterprise

The IceBreak Enterprise allows you to build web applications on the System i™ (AS400) server platform. The Enterprise edition will let you develop and execute all types of web applications based on RPG, CL & COBOL. You can build new programs or enhance your existing applications.

#### Server

Using the IceBreak Server, it is possible to execute IceBreak programs - it is however not possible to change or amend the programs.

#### IceCap

IceCap adds a genuine web interface to your ERP-solution. It satisfies all the necessary requirements, immediately adding an intuitive web interface for the old character-based applications.

Keep the high response times and your function keys - all within an Internet Browser.
